

# Computer week

*This year, our Kindergarten Nr 106 in Warsaw participated in the European Coding Week, which took place on October 10-25. Each preschool group had the opportunity to learn the basics of programming with the use of a coding mat and multimedia equipment in kindergarten. Coding week connecting with computer week because computers, projectors and “magic carpet” are used during this week.*

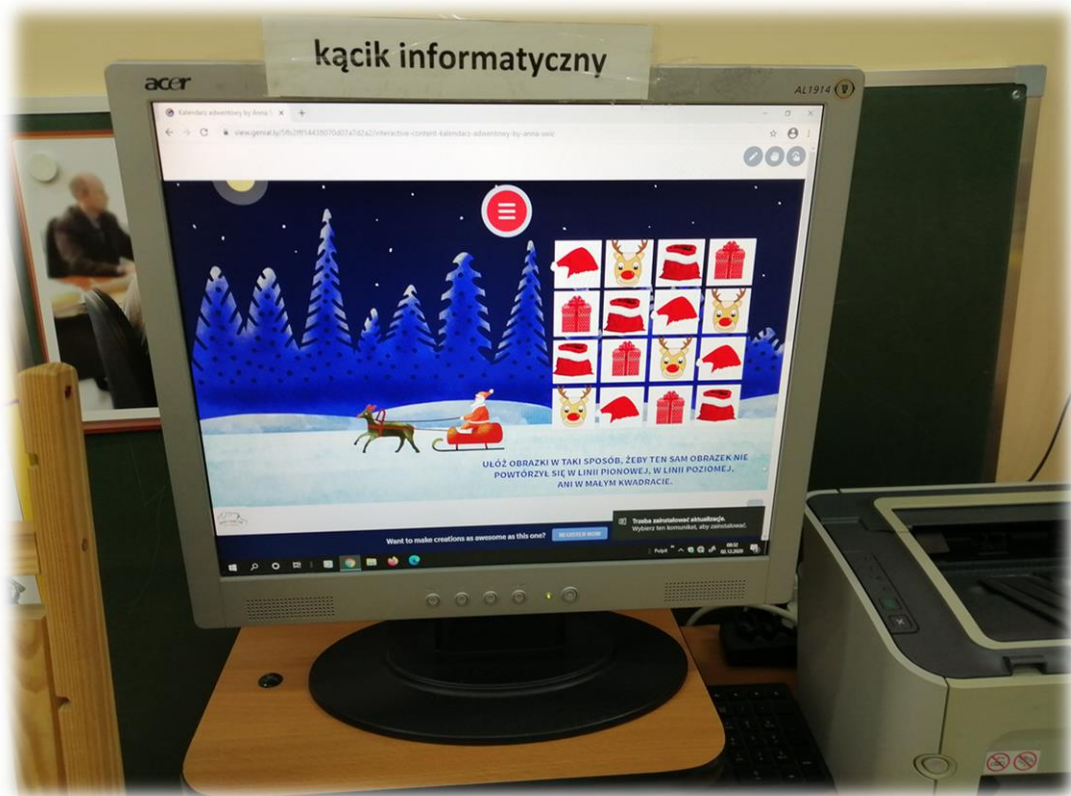

*Coding Week is an initiative that shapes skills such as teamwork, looking for compromises and optimal solutions. It teaches the gradual and responsible introduction of children to the digital world. Conscious, active and creative use of modern technologies. Through this initiative, children acquire new math skills.*

*This event interested our preschoolers so much that we decided to use coding elements in the following months.*

*New to our kindergarten are robots called "Genibot". They are an interesting didactic aid while learning mathematics. They teach to distinguish pages (right from left), count and develop spatial imagination.*

*Kindergarten Nr. 106, Warsaw, Poland*
